An Agentic AI Solution for Cross-Platform Operational Intelligence

Sales Operations Agent

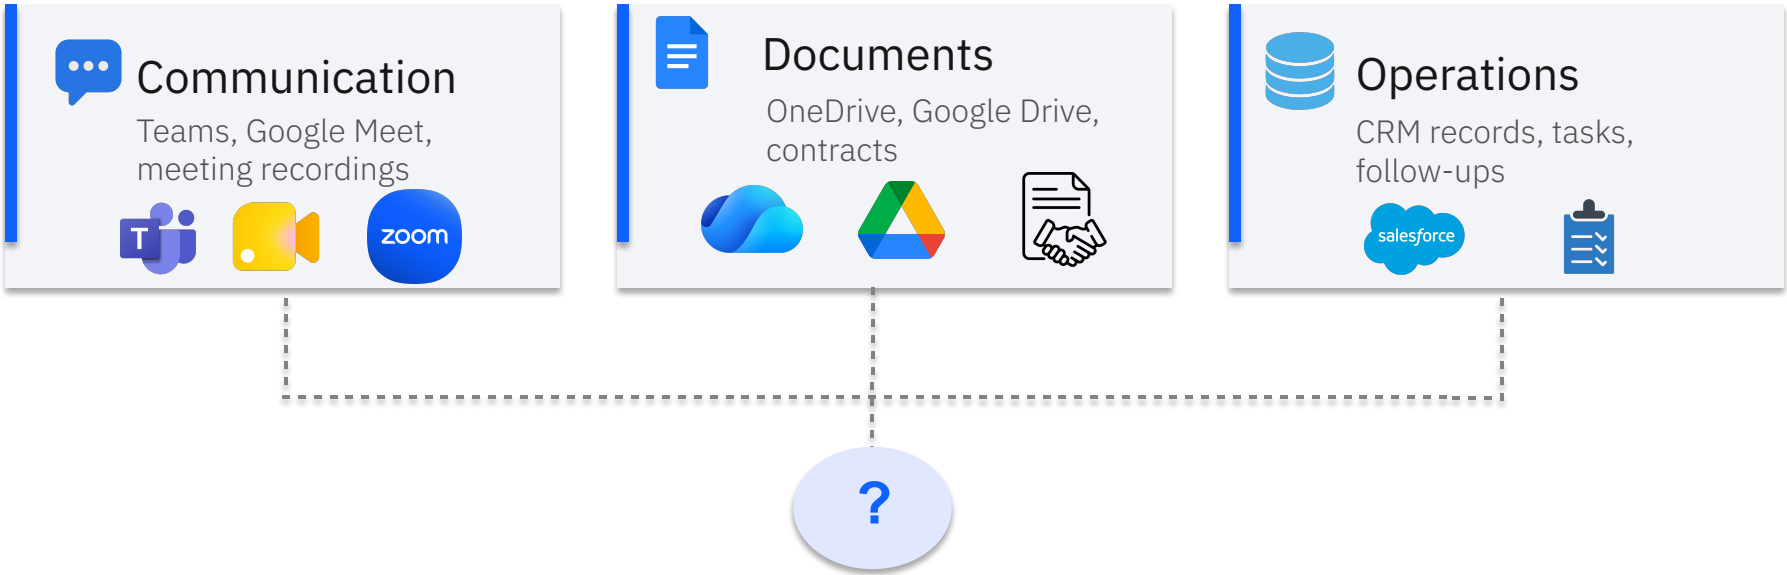

Team: Eason · JP · William · Yudian

Mid-Program Milestone | October 2026

PROBLEM STATEMENT

Enterprise Knowledge Is Fragmented

Following mergers and software migrations, critical business information becomes scattered across disconnected platforms.

RESULT • Lost decisions, unclear ownership, and time-consuming manual follow-ups.

OUR SOLUTION

From Fragmented Data to Connected Action

A vendor-agnostic AI hub turns scattered meeting knowledge into coordinated sales operations.

01 Capture

Cross-platform inputs

Ingest meeting transcripts, deal documents and CRM activity across software suites.

02 Connect

GraphRAG context

Link stakeholders, properties, decisions, deadlines and action items.

03 Coordinate

Operational outputs

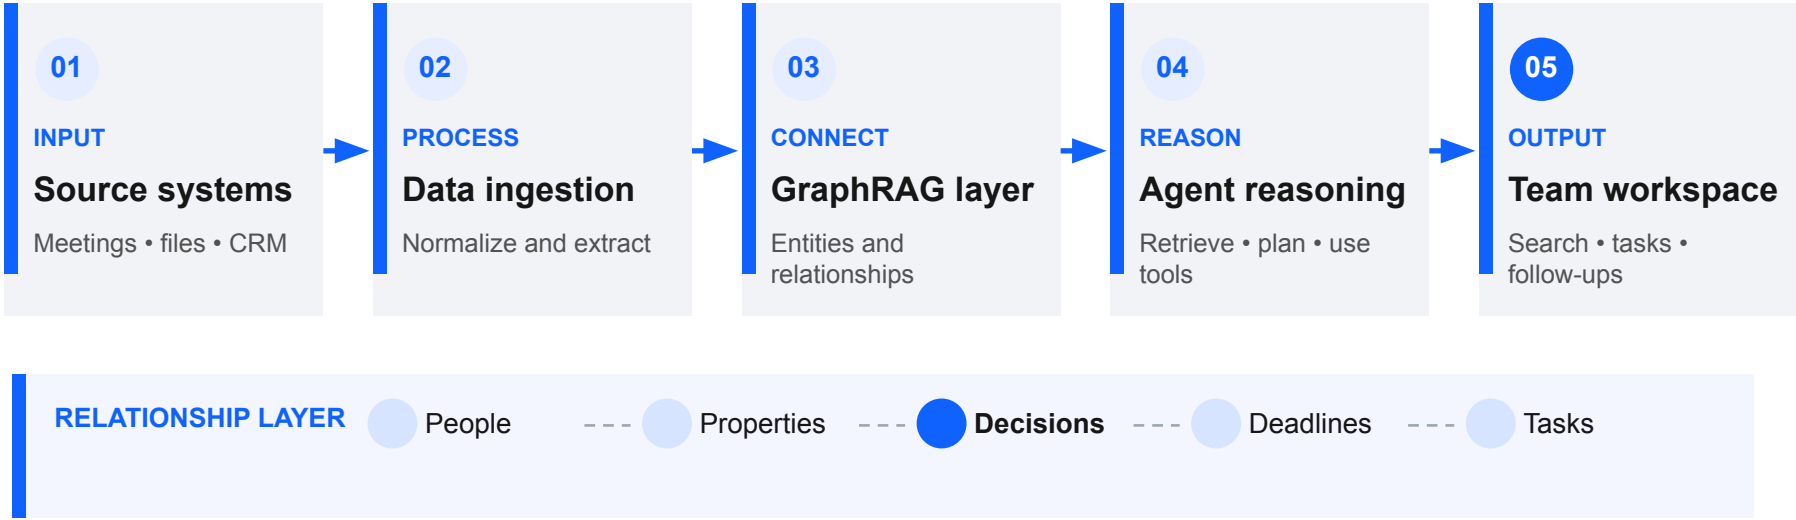

Answer questions, clarify ownership and reconcile follow-ups into shared workflows.

GOAL • **Searchable decisions, clear ownership and fewer manual handoffs.**

PROPOSED WORKFLOW

How the Sales Operations Agent Works

One pipeline brings data together, reasons over relationships and returns reviewable next steps.

OUTPUT • Source-aware answers, linked decisions and unified action tracking.

VALUE PROPOSITION

Less Administration. More Accountability.

Built for sales managers and multi-office brokerage teams navigating hybrid platforms.

01

Find decisions faster

Ask what was agreed in earlier meetings or contracts and retrieve the linked context.

NATURAL-LANGUAGE RECALL

02

Know who owns what

Connect each action item to the people, property and deadline behind it.

CLEAR RESPONSIBILITY

03

Keep work moving

Reconcile dispersed follow-ups into a shared, reviewable operational view.

ACTION-ITEM GOVERNANCE

VALUE • A cross-platform operations hub that turns lost context into auditable action.

AI-USE JUSTIFICATION

Why Agentic AI Instead of Simple Scripts?

Unstructured conversations require context, relationship understanding and multi-step reasoning.

RULES-BASED AUTOMATION

Rigid patterns

- Depends on keywords and fixed fields
- Misses implicit verbal commitments
- Leaves exceptions for manual triage

VS

AGENTIC AI + GRAPHRAG

Context-aware action

- ✓ Interprets ambiguous conversation
- ✓ Traverses cross-meeting dependencies
- ✓ Plans tool-enabled next steps with evidence

ADVANTAGE • Semantic reasoning + connected retrieval + governed tool use.

BUILDING THE MVP

IBM Bob Across the Engineering Lifecycle

IBM Bob supports development; the proposed agent integrates data pipelines and enterprise controls.

01 ARCHITECT

Design & scaffold

- ✓ Multi-agent structure
- ✓ Prompt and extraction templates
- ✓ API orchestration boilerplate

02 INTEGRATE

Connect & deploy

- ✓ ETL + cloud data services
- ✓ IBM Cloud / watsonx endpoints
- ✓ CI/CD and runtime troubleshooting

03 GOVERN

Review & secure

- ✓ Role-based access planning
- ✓ IBM IAM integration checks
- ✓ Sensitive transaction data controls

PROPOSED MVP FLOW • Ingest → Link context → Ask questions → Reconcile actions

NEXT STEP • Prototype the workflow, then verify retrieval accuracy and governance.

USER RESEARCH

Pain Points in Sales

Sean, a Sales Representative outlines his day-to-day operations, detailing the heavy administrative friction that pulls him away from active selling:

- **Meeting Scheduling:** Manually coordinating in-person store visits and travel routes across multiple accounts without an integrated scheduling system .

- **Documentation Lag:** Manually processing meeting notes & emails into the CRM, frequently causing backlogged account notes.
